

Poly-Classic® Structural Column with Craftsman pedestal Mix-N-Match

Mix-N-Match has made it easier than ever to use any structural Poly-Classic column with a Craftsman pedestal.

Poly-Classic columns are available in popular tapered and non-tapered shafts that feature concise edges and meticulous attention to detail. Their hollow centers are useful as channels for downspouts, wiring, and plumbing, yet Poly-Classic columns offer maximum load-bearing capacities and substantial resistance to deformation.

Poly-Classic columns are virtually maintenance-free. They are impervious to termite and carpenter ant attack as well as staining and decaying fungi. High-humidity environments have no effect on these non-porous, waterproof columns.

All Turncraft Poly-Classic columns are covered by a limited lifetime warranty to the original purchaser. Our experienced design department can work with your dealer to create your own custom order specifications.

Poly-Classic Structural Round and Square Column with Craftsman Pedestal

No load support is required since the FRP column is load bearing (unless split). The column should be installed following our normal installation instructions with the exception that the base is not placed and attached. The base should be held above the height of the pedestal. Then the Craftsman pedestal is installed around the FRP column. To finish the installation, the base is then lowered to the top of the pedestal and attached.

Tapered Cap/Base

Non-Tapered Round and Square Cap/Base

Ornamental Capitals

Many styles of ornamental capitals are available for our FRP Columns

Pedestal Cap/Base
